# ANNOUNCEMENTS

- Ahead of lectures?

# DIFFERENTIATION RULES

- Linearity: If  $h(x) = \alpha f(x) + \beta g(x)$  where  $f(x)$  and  $g(x)$  are differentiable on  $x \subseteq \mathbb{R}$  and  $\alpha, \beta \in \mathbb{R}$ , then

$$h'(x) = \alpha f'(x) + \beta g'(x)$$

- Product Rule:

$$(f(x)g(x))' = f'(x)g(x) + f(x)g'(x)$$

- Quotient Rule:

$$\left(\frac{f(x)}{g(x)}\right)' = \frac{f'(x)g(x) - f(x)g'(x)}{g(x)^2}$$

# CHAIN RULE

If  $F = f \circ g$  (i.e.  $F(x) = f(g(x))$ ) where  $g(x)$  is differentiable at  $x$  and  $f(x)$  is differentiable at  $g(x)$  then  $F$  is differentiable at  $x$  and,

$$F'(x) = f(g(x))' = f'(g(x))g'(x)$$

# EXERCISE: DETERMINE THE DERIVATIVES OF THE FOLLOWING FUNCTIONS

a)  $f(x) = x(2x + 5)^3$

e)  $q(x) = \frac{e^{3x}}{\cos(4x)}$

b)  $g(x) = \sin(x) \cos(x)$

f)  $r(x) = \sin(\cos(1 + x^3))$

c)  $h(x) = x \tan(x)$

g)  $s(x) = \sqrt{\frac{x-3}{x^2+2}}$

d)  $p(x) = \sin(x)\sqrt{x^2 + 7}$

h)  $y(x) = (\sin(x) + 1)^x$

# INVERSE FUNCTIONS

Let  $f(x)$  be one-to-one and differentiable on  $I \subseteq \mathbb{R}$ . Let  $a \in I$  and  $f(a) = b$ , if  $f'(a) \neq 0$  then  $f^{-1}$  is differentiable at  $b$  and

$$(f^{-1})'(b) = \frac{1}{f'(a)} = \frac{1}{f'(f^{-1}(b))}$$

# EXERCISE: DETERMINE THE DERIVATIVES OF THE FOLLOWING FUNCTIONS

a)  $f(x) = \cot^{-1} x$

b)  $g(x) = \sec^{-1} x$

c)  $h(x) = \operatorname{cosec}^{-1} x$

Hint: Consider a function  $y = f(x)$  and it's inverse  $x = g(y) = f^{-1}(y)$ , then  $g'(y)f'(x) = 1$ .

$$\frac{d}{dx} \int_a^x f(t) dt = f(x)$$

$$\int_a^b f(x) dx = F(b) - F(a)$$

ANY QUESTIONS?

$$m \frac{d^2 x}{dt^2} = -kx$$

$$\int \frac{dx}{1+x^2} = \tan^{-1}(x) + C$$
